

# Multiview Technology — Information Withholding Report (A■01 Format)

**Report ID:** IW■2025■002

**Classification:** Archival Access Irregularity

**Date:** October 5 2025

**Filed By:** Shawn Wiederhoeft

**Department:** Multiview Technology / CTC Archive Division

## Summary

The first Multiview Technology Cinnamon Toast Crunch grading report — Specimen A■01 — was generated using the original prototype layout format. This format represented the foundational design of the Multiview report system: a four■page document combining technical rigor with conceptual tone. The only surviving instance of this format exists in physical and digital possession of an external party (Curt), to whom the report was printed and mailed as an honorary first recipient. The digital files for A■01 were never preserved in the Multiview archive, creating an archival gap in the project's foundational lineage.

## Incident Details

Curt has declined multiple requests to return or share copies of the original A■01 files. As a result, the prototype layout — which established the design direction later codified in the Multiview Official Grading Report Format v1.2 — remains inaccessible to the Multiview archive. This withholding has been formally documented to maintain procedural transparency and to ensure that the unique status of the A■01 specimen is properly recorded.

## Implications and Archival Notes

- All future reports (A■02 onward) will adhere to the latest approved format version.
- A■01 is hereby classified as a Legacy Format Specimen under exception status.
- The original four■page layout is considered lost but recognized as the conceptual origin of Multiview's visual identity.
- If the source files are ever recovered, they must be digitally authenticated and re■entered into the archive under the original Specimen ID A■01 with notation 'Recovered Legacy Format — Curt Edition.'

## Conclusion

This event illustrates the fragility of bureaucratic permanence — the loss of a file becoming itself an artifact of process. A■01 remains the genesis of the Multiview system, and its absence is to be preserved as part of the project's conceptual record. The incident underscores that even withholding and loss can constitute legitimate forms of documentation within the Multiview framework.
