

# Multiview Technology — A■01 Format Withholding Report

**Report ID:** FW■2025■A01

**Classification:** Archival Access Irregularity

**Date:** October 5, 2025

**Filed By:** Shawn Wiederhoeft

## Summary

During the initial launch of the Cinnamon Toast Crunch grading project, the first specimen (A■01) was processed using the prototype Multiview report layout — a four■page format that set the aesthetic and structural tone for all later reports. This original layout was never archived digitally within the Multiview repository. The only surviving copy of the A■01 report was printed and delivered to an external party (Curt), who became the honorary first recipient of a physical Multiview grading report.

## Facts of Withholding

Following the issuance of A■01, subsequent reports (A■02 onward) were generated using newer formats developed during the transition toward the Multiview Official Grading Report Format v1.2 standard. However, the original A■01 layout — considered the “founding format” — remains exclusively in Curt’s possession. Repeated requests for the digital source files have been declined, effectively placing the inaugural report outside of Multiview’s active archival system.

## Implications

As a result, A■01 is permanently classified under **Legacy Format Exception**. It will remain the only specimen documented in the lost prototype format. All future specimens — beginning with A■02 — are governed by the latest approved format (currently Multiview Official Grading Report Format v1.2). This distinction should be preserved for historical and conceptual continuity within the Multiview archive.

## Conclusion

While this instance technically represents a withholding of original documentation, Multiview Technology recognizes the event as part of its living narrative. The absence of the A■01 source reinforces the project’s conceptual foundation: that bureaucracy, once set in motion, may lose control of its own artifacts.
